Medifocus Guidebook On: Non-Hodgkin's Lymphoma

Synopsis

A comprehensive Guidebook to treatment options and the latest medical advances for Non-Hodgkin's Lymphoma. The term "lymphoma" is used to describe a variety of cancers that affect the lymphatic system. Lymphomas tend to form solid tumors in the body and are often felt as a painless lump that can occur almost anywhere in the body. The two major types of lymphomas are Hodgkin's Disease and non-Hodgkin's lymphoma. Non-Hodgkin's lymphoma (NHL) is the 6th leading cause of cancer death in the United States. Approximately 95% of cases occur in adults 40 to 70 years in age. The exact cause of NHL is not known and, although a variety of risk factors have been identified, most patients with NHL have no known risk factors. The most common symptom of NHL is a persistent swelling of lymph nodes anywhere in the body. Other symptoms may include an enlarged liver or spleen, chest pain, shortness of breath, generalized fatigue, drenching night sweats, and loss of appetite. The treatment options for patients with NHL depend upon a variety of factors including the grade of the lymphoma (low, intermediate, or high); the stage or extent of spread of the disease, the areas of the body affected by the lymphoma, and the general health of the patient. In general, the treatment options range from "watchful waiting" in the earliest stage of the disease to high-dose chemotherapy with stem cell transplantation for patients with aggressive NHL who fail to respond to standard treatment. A variety of new treatments are also currently being investigated. Learn more by ordering your MediFocus Guidebook on Non-Hodgkin's Lymphoma, the most comprehensive, up-to-date source of information available. You will get answers to your questions, including: * What are the risk factors of Non-Hodgkin's Lymphoma? * What standard and alternative treatment options are available? * Where are the leading doctors, hospitals and medical centers that specialize in Non-Hodgkin's Lymphoma research and treatment? * What are the results of the latest clinical trials? * Where are the support groups and additional resources in my area? * What are the promising new treatments on the horizon? You won't find this combination of information anywhere else. Your health matters. Don't leave it to chance. Arm yourself with the most comprehensive, up-to-date research available by ordering your MediFocus Guidebook today.
