Each of the 690 identification pictures is a full-color photograph of a seashore creature.

Arrangement by shape and by color makes identification quick and easy. 666 species are covered in full detail.

The author, Norman A. Meinkoth, is Professor Emeritus of Zoology of Swarthmore College.

Not overly impressed with the layout. The pictures are in one section, and the information in

another. I worry that this could get annoying. I do like that the different creature types are split into categories, but more could probably be done to differentiate these sections, and/or the habitat type, location, etc). The small dust jacket is a bit odd and flimsy, but the book doesn't look very good without it either. I think the book will be useful, and pretty to flick through the pictures too, but these probably won't be my first choice for future field guides.

This is a very informative and well photographed book!

Great product and service love it

A great little guide. Lots of great pictures and information. I purchased it for my nephew the budding biologist and it was perfect.

The usual first class book from Audubon.

We bought this for our eleven-year-old grandson, who is already fascinated with and knowledgeable about marine life. I knew about the Audubon guides, because my parents keep them at their place on the beach, and my husband and I use them to identify the wildlife we see on our walks there. The organization and color photos help us to find the creatures we've observed.

THIS IS THE ABSOLUTE BIBLE FOR SNORKELING....THIS IS A MUST IF YOU LAKE TO DO DIVING AND OR FISHING WITH YOUR KIDS

This is one wonderful and very useful field guide for identifying creatures living on the seashore. It covers most of the basic sealife that one would generally observe and notice living on the coastal shores. Very handy and useful. Definitely one book that should be in one's library if you enjoy the coast.
