Synopsis

Evidence-Based Teaching in Nursing: A Foundation for Educators, Second Edition focuses on providing potential and current nursing faculty with the tools and knowledge they need to achieve highly successful outcomes for teaching nursing students and staff. The Second Edition also concentrates on the full role of nursing faculty and not just the educational process. This robust text provides concrete examples of best practices within nursing education and has been crafted in a manner to excite faculty members to create a learning environment grounded in best practices and evidence. Customer Reviews

As far as books go, this worked exactly as I hoped. I purchased the older edition to save money and it was a great substitute

A well-written nursing perspective on education that stresses the different generation of learners in nursing programs today, which gives support to why nursing education is incorporating more technology such as on-line learning. The book itself is cheap and over priced for what it is- thin

cover, smaller size, simple layout, no color or photographs. 's price is the only way to buy this book as the full retail price of it is ridiculously expensive for what it is. 's delivery was, as always, perfect!

I had to buy this book for a course on nursing education at CSULB. I'm not really interested in the topic, I just took it so that I could fulfill credit requirements and get financial aid ;) Taking the course saved about a couple grand. Otherwise it was overpriced and worthless to me. I don't even remember anything about it.

Great product.

Well organized with chapter objectives, questions and summaries. A great resource for graduate students and those considering seeking certification as nurse educators.

just what i expected--thanks

Grad school book, just what the professor ordered.

Excellent resource to have
